

2013 CTF Scoreboard

Updates

10.3.14.228 has been taken offline. Please use
sixtyseven.twentythree.seventynine.onehundredandthirteen

HINTS: Take a look at the `id` parameter in the URL. The value is a number, but what else can it be? A follow-up: perhaps look into some PHP functions. Examples:
`phpinfo();`, `glob();`

If you are having trouble connecting to the game server, another option just opened: connect to SSID EECS and go to <http://10.3.14.228>

When you submit a flag, it has to be the entire key (e.g., `key{...}`)

Please make sure to write your name on the CTF worksheet else you will not receive attendance credit for this assignment!

The SSID of the wireless network to play is MINGCHOW-CTF

Challenges

Challenge 1: You are staring right at it. 100 points

Challenge 2: Remember to complete the course midsemester evaluation! 100 points

Challenge 3: Crack me if you can. 300 points

Challenge 4: Look again, pay careful attention. 200 points

Challenge 5: All your base64 are belong to us in the roots. 200 points

Challenge 6: Buried in the dump. 300 points

Challenge 7: That's the name of the game. 200 points

Challenge 8: Remember, you need to sign off too! 100 points
